## Marine Pollution: Functional Responses

Marine Pollution: Functional Responses presents the proceedings of the symposium, "Pollution and Physiology of Marine Organisms," held on November 14-17, 1977, at Hobcaw Barony in Georgetown, South Carolina. It explores the effects of pollutants, such as petroleum hydrocarbons, heavy metals, pesticides, and polychlorinated biphenyls (PCBs), on marine organisms ranging from pink salmon fry to sculpins, estuarine fishes and crabs, bivalve mollusks, lugworms, and oysters.

Comprised of four parts encompassing 22 chapters, this volume begins with an overview of the fate and effects of petroleum hydrocarbons on marine biota. It proceeds with a discussion of the hydrocarbon metabolic system in polychaetes and their role in the degradation of hydrocarbons in sediments; the effects of aromatic hydrocarbon toxicants on breathing rates of pink salmon fry; and biological and toxicological effects of heavy metals and other cations on marine species. The book also describes the impact of PCBs and pesticides on the estuarine environment; and how more specialized and less persistent chemicals affect the development and reproduction of nontarget organisms such as Crustacea.

This book will be a valuable resource for marine scientists, ecologists, and students.
