Kenya: A Natural Outlook: Chapter 14. The Importance of Fire Ecology in Protected Areas Management (Developments in Earth Surface Processes) Ilaria Palumbo

In this chapter, we discuss the ecological role of fire and how this is relevant to biodiversity and park management. We summarize the role fire has in different types of ecosystems and why conservation programmes would benefit from including fire plans. We present the fire activity in the Kenyan protected areas between the years 2002 and 2012. The information is derived from satellite observations and processed to show the fire seasonality and how fire occurrence is distributed in different vegetation classes. We also provide insights about how fire can contribute to land-cover change looking at long time series of data.
