## **Curves and Surfaces (UNITEXT)** M. Abate, F. Tovena

The book provides an introduction to Differential Geometry of Curves and Surfaces. The theory of curves starts with a discussion of possible definitions of the concept of curve, proving in particular the classification of 1-dimensional manifolds. We then present the classical local theory of parametrized plane and space curves (curves in  $n$ -dimensional space are discussed in the complementary material): curvature, torsion, Frenet's formulas and the fundamental theorem of the local theory of curves. Then, after a self-contained presentation of degree theory for continuous self-maps of the circumference, we study the global theory of plane curves, introducing winding and rotation numbers, and proving the Jordan curve theorem for curves of class  $C^2$ , and Hopf theorem on the rotation number of closed simple curves.

The local theory of surfaces begins with a comparison of the concept of parametrized (i.e., immersed) surface with the concept of regular (i.e., embedded) surface. We then develop the basic differential geometry of surfaces in  $R^3$ : definitions, examples, differentiable maps and functions, tangent vectors (presented both as vectors tangent to curves in the surface and as derivations on germs of differentiable functions; we shall consistently use both approaches in the whole book) and orientation. Next we study the several notions of curvature on a surface, stressing both the geometrical meaning of the objects introduced and the algebraic/analytical methods needed to study them via the Gauss map, up to the proof of Gauss' Teorema Egregium.

Then we introduce vector fields on a surface (flow, first integrals, integral curves) and geodesics (definition, basic properties, geodesic curvature, and, in the complementary material, a full proof of minimizing properties of geodesics and of the Hopf-Rinow theorem for surfaces). Then we shall present a proof of the celebrated Gauss-Bonnet theorem, both in its local and in its global form, using basic properties (fully proved in the complementary material) of triangulations of surfaces. As an application, we shall prove the Poincaré-Hopf theorem on zeroes of vector fields. Finally, the last chapter will be devoted to several important results on the global theory of surfaces, like for instance the characterization of surfaces with constant Gaussian curvature, and the orientability of compact surfaces in  $R^3$ .

### From reader reviews:

#### **Amelia Gallup:**

Have you spare time for the day? What do you do when you have more or little spare time? Sure, you can choose the suitable activity with regard to spend your time. Any person spent their particular spare time to take a move, shopping, or went to typically the Mall. How about open as well as read a book entitled Curves and Surfaces (UNITEXT)? Maybe it is being best activity for you. You understand beside you can spend your time with the favorite's book, you can smarter than before. Do you agree with it has the opinion or you have various other opinion?

#### **Edward Phillips:**

The reserve untitled Curves and Surfaces (UNITEXT) is the reserve that recommended to you to read. You can see the quality of the guide content that will be shown to you actually. The language that author use to explained their ideas are easily to understand. The article author was did a lot of investigation when write the book, so the information that they share for your requirements is absolutely accurate. You also could possibly get the e-book of Curves and Surfaces (UNITEXT) from the publisher to make you more enjoy free time.

#### **Jennifer Trojanowski:**

Reading can called head hangout, why? Because when you are reading a book specifically book entitled Curves and Surfaces (UNITEXT) your mind will drift away trough every dimension, wandering in each aspect that maybe unidentified for but surely will end up your mind friends. Imaging each and every word written in a book then become one type conclusion and explanation which maybe you never get previous to. The Curves and Surfaces (UNITEXT) giving you one more experience more than blown away the mind but also giving you useful facts for your better life on this era. So now let us explain to you the relaxing pattern the following is your body and mind will likely be pleased when you are finished reading through it, like winning a sport. Do you want to try this extraordinary wasting spare time activity?

#### **Leonie Blazek:**

Many people spending their time by playing outside using friends, fun activity along with family or just watching TV all day every day. You can have new activity to pay your whole day by examining a book. Ugh, do you think reading a book can actually hard because you have to bring the book everywhere? It ok you can have the e-book, delivering everywhere you want in your Smart phone. Like Curves and Surfaces (UNITEXT) which is obtaining the e-book version. So , why not try out this book? Let's find.
