Handbook of Hydrothermal Technology (Materials science & process technology)

K. Byrappa, Masahiro Yoshimura

Handbook of Hydrothermal Technology (Materials science & process technology) K. Byrappa, Masahiro Yoshimura

Quartz, zeolites, gemstones, perovskite type oxides, ferrite, carbon allotropes, complex coordinated compounds and many more -- all products now being produced using hydrothermal technology. Handbook of Hydrothermal Technology brings together the latest techniques in this rapidly advancing field in one exceptionally useful, long-needed volume. The handbook provides a single source for understanding how aqueous solvents or mineralizers work under temperature and pressure to dissolve and recrystallize normally insoluble materials, and decompose or recycle any waste material. The result, as the authors show in the book, is technologically the most efficient method in crystal growth, materials processing, and waste treatment. The book gives scientists and technologists an overview of the entire subject including: À Evolution of the technology from geology to widespread industrial use. À Descriptions of equipment used in the process and how it works. À Problems involved with the growth of crystals, processing of technological materials, environmental and safety issues. À Analysis of the direction of today's technology.

In addition, readers get a close look at the hydrothermal synthesis of zeolites, fluorides, sulfides, tungstates, and molybdates, as well as native elements and simple oxides. Delving into the commercial production of various types, the authors clarify the effects of temperature, pressure, solvents, and various other chemical components on the hydrothermal processes.

- Gives an overview of the evolution of Hydrothermal Technology from geology to widespread industrial use
- Describes the equipment used in the process and how it works
- Discusses problems involved with the growth of crystals, processing of technological materials, and environmental and safety issues

From reader reviews:

Freida Gilbert:

What do you regarding book? It is not important to you? Or just adding material when you want something to explain what your own problem? How about your extra time? Or are you busy person? If you don't have spare time to do others business, it is give you a sense of feeling bored faster. And you have free time? What did you do? Everyone has many questions above. They have to answer that question since just their can do that. It said that about e-book. Book is familiar in each person. Yes, it is suitable. Because start from on pre-school until university need this specific Handbook of Hydrothermal Technology (Materials science & process technology) to read.

Shirley Joy:

Typically the book Handbook of Hydrothermal Technology (Materials science & process technology) has a lot of information on it. So when you read this book you can get a lot of gain. The book was written by the very famous author. The author makes some research ahead of write this book. This book very easy to read you will get the point easily after reading this article book.

Norma Dickerson:

Are you kind of active person, only have 10 as well as 15 minute in your day to upgrading your mind talent or thinking skill actually analytical thinking? Then you are experiencing problem with the book as compared to can satisfy your limited time to read it because this all time you only find e-book that need more time to be go through. Handbook of Hydrothermal Technology (Materials science & process technology) can be your answer as it can be read by you who have those short time problems.

Marivel Tye:

Reading a book to get new life style in this calendar year; every people loves to go through a book. When you examine a book you can get a wide range of benefit. When you read publications, you can improve your knowledge, since book has a lot of information upon it. The information that you will get depend on what sorts of book that you have read. If you need to get information about your research, you can read education books, but if you want to entertain yourself you are able to a fiction books, these us novel, comics, as well as soon. The Handbook of Hydrothermal Technology (Materials science & process technology) will give you new experience in reading through a book.
