Intelligence Collection Robert M. Clark

***Intelligence Collection* by Robert M. Clark**—one of the foremost authorities in the field—offers systematic and analytic coverage of the “how and why” of intelligence collection across its three major stages: the front end (planning), collection, and the back end (processing, exploitation, and dissemination). The book provides a fresh, logical, and easily understandable view of complex collection systems used worldwide. Its groundbreaking organizational approach facilitates understanding and cross-INT collaboration, highlighting the similarities and differences among the collection INTs. Part one explains how the literal INTs such as communications intelligence and cyber collection work. Part two focuses on nonliteral INTs including imagery, electronic intelligence, and MASINT. All chapters use a common format based on systems analysis methodology, detailing function, process, and structure of the collection disciplines. Examples throughout the book highlight topics as diverse as battlespace situational awareness, terrorism, weapons proliferation, criminal networks, treaty monitoring, and identity intelligence.
